

ConnectPoint™ 2.0

Seamlessly Integrate Magento
with your Sage X3

pixafy®
A Net@Work Company

Benefits of the ConnectPoint Dashboard & Integration Engine

- ✓ Merchants are not locked in to proprietary "point" integration solution; ability to develop and enhance on top of existing code base.
- ✓ Use of Gartner Magic Quadrant, industry leading iPaaS solution (Dell Boomi) allows us to extend integrations to other software/tools, aside from ERP (CRM, OMS, etc.) using the same tool, with pre-built connectors (which may need to be modified) for dozens of other solutions.
- ✓ Community of resources that know platform AND training resources so that clients themselves can build out/enhance integrations on their end.
- ✓ Simplified communication - no need for custom coding between 2 systems (built on different code bases), write connection point once, and integrate with multiple end points
- ✓ Centralized system to monitor integration (as well as alerts, backups, etc.)
- ✓ Both systems can operate independently - if either system has an outage (planned or unplanned) the other system continues to operate and data syncs can be queued up till service restored
- ✓ Flexibility to develop custom workflows
